

# Marketing Analytics Dashboard | Power BI + SQL Server

**Executive dashboard for campaign performance, lead generation and conversion analytics.**

## Project Summary

This project presents a complete Marketing Analytics solution developed using Power BI and SQL Server. The dashboard was designed to support executive decision-making through interactive visualizations, KPI tracking, revenue analysis, conversion performance and business storytelling. The solution includes dimensional data modeling, DAX measures, time intelligence calculations and dynamic filtering capabilities.

## Main Features

- Interactive Power BI dashboard
- Revenue & ROI analysis
- Campaign conversion performance
- Lead generation and conversion funnel
- Time intelligence calculations
- Trend analysis and KPI comparison
- Dynamic slicers and filtering
- Executive business insights
- Dimensional data modeling

## Technologies Used

- Power BI
- DAX
- SQL Server
- Power Query
- Data Modeling
- Business Intelligence
- Time Intelligence

# Data Model Architecture

| Table Type       | Description                        |
|------------------|------------------------------------|
| Fact Tables      | Leads, Conversoes                  |
| Dimension Tables | Campanhas, DimDate                 |
| Relationships    | 1:* dimensional model              |
| Analytics        | KPIs, Trends, ROI, Conversion Rate |

## Business Insights

The dashboard enables users to identify top-performing campaigns, evaluate ROI efficiency, monitor conversion rates and analyze revenue growth trends over time. Interactive filtering allows campaign comparison by month, channel and location, helping stakeholders understand marketing effectiveness and support data-driven decisions.
